Presenting Problem(s)

CUST NEW KITTEN EXAM

new patient exam/recently rescued

2:09 PM - SEP 11 24 - DM

recently rescued from Puerto Rico

received felv on 8/31 and had fecal - mom to email results

due for RV and Fvrpcp

currently feeding Tiki kitten wet - P not interested in dry food

sneezing with nasal discharge

no eyes bilaterally, but sockets are open/have conjunctiva. Eye crusting and discharge. Pawing at eyes

scanned - no microchip

Exam Detail

Appearance	Normal	Pet appears bright alert, and responsive. Escalating FAS with handling or diagnostics, but able to perform blood draw with burrito. BCS = 5/9, HR 160 RR 36 T 99.8 Pain score: 0
Eyes	Abnormal	ANOPHTHALMIA OU - Orbital sockets are open, have nonerythematous conjunctival with moderate yellow to brown mucoid discharge. Palpebral is present OU.
Ears	Abnormal	Mild brown waxy debris AU, did not assess TM's due to patient size and wiggleness.
Nose/ Throat	Abnormal	Sneezing with occasional purulent nasal discharge produced. No palpable thyroid enlargement.
Oral	Normal	Mouth is normal in appearance. Teeth and gums are in good condition without evidence of gingivitis. Erupted adult 101/201.
Cardiovascular	Normal	The heart sounds and rhythm are normal. No murmurs or irregular beats are heard. Pulses are strong and regular.
Respiratory	Normal	Lung sounds are normal on both sides. No coughing or excess

respiratory effort noted.

Digestive/ GI	Normal	Soft and nonpainful on abdominal palpation, no organomegaly or mass effect.
Urogenital	Normal	Bilateral cryptorchid with otherwise normal male genitalia, however unable to extrude penis at this time.
Musculoskeletal	Normal	Muscle tone is normal. No evidence of arthritis or other musculoskeletal disease is noted.
Neurologic	Normal	All reflexes and neurologic functions appear normal aside from visual assessments.
Dermatology	Normal	Skin and coat appear normal. Pet is not excessively itchy. No areas of fur loss seen. No abnormal odor detected.
Lymph Nodes	Normal	All peripheral lymph nodes are normal in size and non painful.

Recommend (Fel Normal

Felv / Fiv test - -

FELV result	neg
FIV result	neg

2:44 PM - SEP 11 24 - DM
informed O during appointment

Notes

A -

Anophthalmia - r/o congenital vs pthisis bulbi secondary to inflammatory/infectious/traumatic etiologies vs other
Conjunctivitis OU - r/o secondary to URI vs other infectious vs inflammatory vs other
Sneezing - r/o URI vs viral vs less likely nasal mites vs other
Bilateral cryptorchid

P - Hard to know the cause of Casper's lack of eyes, though I am suspicious of a congenital cause given he is also bilaterally cryptorchid. Hold on vaccines given last FELV was boosted 8/31. Given unsure of age, I would recommend a restart of FELV vax, and start FVRCP series 9/21/2024. Booster in 3-4 weeks with Rabies (1 year) vaccine. Recommend broad spectrum deworming today + RX nexgard combo for administration 1 month from last Revolution dose.

Diagnostics approved:

- ear cytology: rare yeast, 1+ cocci AU
- FELV/FIV in house: negative

Treatments:

- Pyrantel 0.3 mL PO
- RX single dose Nexgard combo topical
- RX Cerasothe KET otic cleanser: AU SID x 10 days
- RX terramycin OU BID x 10 days
- RX clavamox 18.75 mg PO BID x 10 days

Return in 2 weeks for FELV restart, FVRCP start if URI symptoms have resolved. Booster 3-4 weeks later with Rabies 1 year). If fecal from previous vet is not provided, recommend repeat fecal. Monitor for descent of testicles or recommend cryptorchid surgery at 6-8 months.
